Your Hammam in a DOOR

"Your Hammam in a DOOR", this, in a nutshell, is the idea behind DoorSteam by Aqua International, designed in collaboration with Arch. Talocci. The essence of the project is being able to construct a hammam in any home, be it special area or in your bathroom shower.

With DoorSteam, Aqua International provides an easy-to-install door consisting of an opening glass panel and a column featuring all the necessary in your own home.

Using the DoorSteam system makes it easy to create your own hammam. DoorSteam consists of a 19cm. wide, 8cm. deep extruded aluminium column that houses the steam generator and the steam diffusion and forced ventilation heating systems, the "caldo doccia" function, the programmable control panel with graphic display and the RGB LED lamp, consisting of white light and coloured light combinations for the various functions. Aqua International completes your hammam with an insulation kit and specifically designed furnishing elements to make the designated area both comfortable and functional.

The sobriety and elegance of DoorSteam is such that it allows you complete freedom in choosing the shape, area and type of coverings for a fully-customized hammam that can blend into the surroundings.

DoorSteam is system that combines a simple, modern glass door with an equipped column featuring the control panel, steam outlet, room ventilation and heating system, as well as Led RGB colour therapy.

Our architect has designed this high tech product with a view to reducing the space taken up by components inside the Hammam whilst also simplifying installation and connection of the generator.

Aqua International completes your hammam with an insulation kit and specifically designed furnishing elements to make the designated area both comfortable and functional.

Available models in right-hand or left-hand

Size: 88 x 198 cm.
Column in a extruded aluminium, 19cm wide, 8cm deep.
Steam generator available with different power outputs to meet different needs: from 2,2 a 6,0 Kw

Available models in right-hand or left-hand

Size: 145 x 198 cm.
Column in a extruded aluminium, 19cm wide, 8cm deep.
